

Black Tiger Shrimp Feed

Superior nutrition to boost survival of Penaeid shrip species

Excellent Performance

- 120 days culture cycle from PL12
- stocking density of 35 pc/m2
- average water salinity 20 ppt
- sufficient dissolve oxygen

Final FCR
1.5 ~ 1.8
to ABW
28 gram

Lucky Star Black Tiger prawn feed contains superior nutrition that are essential for superior growth and boost survival of *Penaeid* shrimp species. The feed is processed by the latest extrusion technology to minimize nutritional leach and affect water quality which are potential precursor to pathogen and diseases.

- ★ High marine based ingredients that are naturally attractive to *Penaeid* shrimps
- ★ High in marine based amino and fatty acid profiles that are essential for improved health and growth
- ★ Latest extrusion technology for better feed stability and nutritional leach
- ★ Leverage mechanism to avoid using artificial binder in formula
- ★ Superior feed digestibility and nutrition assimilation result in superior FCR and reduced production cycle
- ★ Inclusion of high quality refine marine lipids
